

DG29™

Sheep and Goat Pregnancy Results on Demand

DG29 is an easy-to-use sheep and goat blood pregnancy test. Blood samples are drawn on the farm or ranch, forwarded to AgSource Laboratories in Menomonie, Wis., and pregnancy diagnosis is determined by the presence of a pregnancy-related protein.

Test as early as 35 days post breeding for quick identification of open females!

When Can Animals Be Tested?

DG29 can be conducted on ewes or does as early as 35 days post breeding.

How Does The Test Work?

DG29 uses ELISA (enzyme-linked immunosorbent assay) technology to detect a specific pregnancy-related protein within serum extracted from the blood sample. Based on the presence or lack of presence of the protein, positive (pregnant) or negative (open) results are reported. Results are sent to the producer via mail, fax or e-mail.

How Accurate Are DG29 Results?

Research published in the Canadian Veterinary Journal has proven DG29 to be over 99 percent accurate. For the most accurate results, sheep and goat producers must follow the proper blood sample collection timeline.

How Are Samples Collected and Shipped?

At least 2 cc of blood should be drawn from the jugular vein located under the animal's neck. The blood tubes and a test submission form are then sent to the laboratory. Samples can be transported to the laboratory by the producer, sent with an AgSource DHI technician, or mailed via USPS, UPS or FedEx. Samples are ran on Thursdays of each week. Detailed instructions on how to collect and ship samples are included in the DG29 test kit.

To Order:

Contact your local AgSource or Genex representative, contact AgSource at 800-236-0097, call Genex customer service at 888-333-1783 or order online through the Genex Profit Shop at profitshop.crinet.com.

DG29™ Blood Pregnancy Sheep & Goat Test Sample Submission Form

Form for submitting blood samples for pregnancy testing. Includes fields for Client Name, Address, Phone, and Animal Information (Breed, Sex, Age, etc.).

AGSOURCE MILK ANALYSIS LABORATORY

Form for submitting milk samples for analysis. Includes fields for Client Name, Address, Phone, and Animal Information (Breed, Sex, Age, etc.).

DG29™

Pregnancy Results on Demand

All blood samples sent to the lab must be submitted in the CRI provided red-topped blood tubes. With all purchasing options, the member or customer must pay shipping charges for transporting the samples from the farm to the laboratory.

Complete Kit

Includes: Test analysis, CRI red-topped blood tubes, disposable needles, needle holder, hazardous material shipping containers plus shipping to the farm or ranch.

Description	Retail Price	Price/Test
6-Test Complete Kit	\$32.00	(\$5.33/test)
24-Test Complete Kit	\$108.00	(\$4.50/test)
48-Test Complete Kit	\$211.00	(\$4.40/test)
72-Test Complete Kit	\$311.00	(\$4.32/test)

To Order:

Contact your local AgSource or Genex representative, contact AgSource at 800-236-0097, call Genex customer service at 888-333-1783 or order online through the Genex Profit Shop at profitshop.crinet.com.

Test Only

Includes: Test analysis and the required CRI red-topped blood tubes. Shipping to the farm or ranch not included.

Description	Retail Price	Price/Test
48 Tubes and Tests	\$197.00	(\$4.10/test)
